

Retinal Screening

Figure 1: Retinal Screening of a diabetic eye

Figure 2: Retinal Screening of a healthy eye

Our retinal camera takes a high resolution, wide field image of the back of your eye. The doctor recommends that **all patients** have the Retinal Screening annually. This test will detect problems such as macular degeneration, glaucoma, retinal holes, retinal detachments and diabetic retinopathy **without dilation** for most patients. Early detection is crucial.

The fee to perform the retinal screening is **\$36.00** unless covered by your vision benefits.
